Continuation of 5. does NOT place the application in condition for allowance because: Applicant's arguments averring the failure of the cited prior arts to teach the elected compound acting in insulin secreting cells have been considered, but are not found persuasive. Examiner notes that the limitation of "acting in the insulin secreting cells" recited in the claims to describe the characteristic of the compounds recited in the claims. The active site of the elected compound, i.e., in insulin secreting cells, would be considered an intrinsic properties of the compound itself, absent evidence to the contrary. Please note that the prior art does not expressly teach that the elected compound not capable of acting in the insulin secreting cells. Therefore, the elected compound would be considered as capable of exerting the activity in the insulin secreting cells.
